

Natural Stone Cleaning Specification.

All tips and guidelines should be taken as general advice and should be used in addition to the relevant Australian standards. These tips and advice are given in good faith. In no way do these replace the service of professional contractors / consultants.

Maintenance and cleaning.

Like any surface, stone will require a degree of maintenance. The correct sealing from the start is the key to minimal maintenance.

Heavily tracked areas will require more maintenance than those that are seldom used. The main maintenance regime required for stone is regular sweeping and vacuuming. In addition, the floor should be mopped regularly with a neutral routine cleaner formulated specifically for use with all tiles and natural stone products.

The use of abrasive, acidic or alkali household detergents should be avoided as they can remove the tiles surface sealant or in extreme cases damage stone or porcelain.

Please note: acidic cleaners should not be used. (unless stated)

Always use accredited sealers and cleaners:
